How to save water

Did you know that baths use 37 gallons of water? you waste lots of water every day without ever realizing it. Without water we would not be able to live, neither would plants and animals. There are lots of ways to do your part in saving water indoors and outdoors.

Here are some ways to save water indoors. One way to save water is to take shorter showers. A shower uses 7 gallons of water every minute. That's way too much! you can get a free low-flow shower head at your local water district, and save water.

Another way is to turn off the water while you are brushing your teeth. you can get your toothbrush wet, then turn the water off. When you're finished brushing, turn the water back on to rinse your toothbrush and mouth.

This way you don't use too much water.

Lastly, scrape your plate before putting it in the dishwasher. do not rinse every dish. Instead, scrape your plate into the compost, then put it right into the dishwasher. This saves lots of water rinsing off

Sky

The dishes when they will get rinsed in the dishwasher. And only turn it on if its full. you can save lots of water inside.

In addition to saving water indoors, you can also save water outdoors. One way to save water outdoors is to collect already used water to water plants. If you are waiting for the water to get hot, collect the water that you are not going to use, and water the plants with it. This helps save water because instead of letting all of the unwanted water go down the drain you are reusing it to water your plants. Another way to save water outdoors is to use a rain barrel to catch rain water, you could use this water to water your plants as well. A rain barrel saves water because it uses rain water to water your plants and not water from a hose. your plants don't need perfectly clean water from a hose, they can drink rain water. Lastly, use a broom to clean the drive way, not the hose. If you are going to clean the drive way with a hose, you are wasting gallons of water. With a broom you can clean your driveway

sky

Without using any water, there are many ways to save water outdoors.

We can all save water indoors and outdoors. Water is a valuable resource. It doesn't come whenever we need it. We should only use what we need. Let's do our part to save water.

Water is a valuable resource. We all need to do our part to save it. Water doesn't come whenever we need it. We all need to use just what we need.

Adapted from Diana Leddy

^{outdoors}
collect already used water to water plants

rain barrel to catch water then use on plants

IF you use sprinklers make sure
that they only water the plants

use broom to clean driveway
not hose

IF there is a pool get a pool
cover

Indoors
take short showers

free low-flow shower heads

A shower uses 7 gallons of water every minute

do not leave water on when brushing

get tooth brush wet then rinse

let someone know if there is a leaky faucet or toilet

tell someone to repair

scrape your plate before putting it in a full dishwasher

do not rinse every plate

keep pitcher of water in fridge if thirsty

do not run water to get cold
